## Generic Medications Benefit Design

### What is a two-tiered generic medications benefit design?

A two-tiered generic medication benefit design features a list of generic drugs with two levels of member cost-share amounts for generic prescription medications. This gives an incentive to request lower-cost generic medications whenever possible. Your cost share amount depends on which tier of the generic drug list your medication is in.

Tier I: Lower-cost generic drugs.

Tier II: Higher-cost generic drugs

Generic drugs deliver a better value than brand-name drugs. They work the same way as brand-name drugs, but can cost between 30 and 80 percent less.<sup>1</sup> The medications in the list below are the lower-cost generic medications that are in Tier I of your prescription drug plan. You may use the higher-cost generic medications in Tier II, but those medications will cost you more than Tier I generics. Generic medications not listed below would follow your benefit plan out-of-pocket for Tier II. NOTE: This is a list of two-tiered generic medications. Drugs may appear on the list that may or may not be covered under your plan. This list is subject to change. If you have questions, please contact Blue Cross and Blue Shield of Nebraska's Member Services department at the number on the back of your member ID card.
